

# Power

fast and as  
easy as ...

**5MW**  
**Building Blocks**

# ACTIVATE

When that unexpected power shortage occurs and you need a supply fast, **Cummins Power Generation** can react just as quickly.

The 5MW Building Blocks are standalone mini power stations. The concept is simple – just order power, when you need it, where you need it. Each mini power station has its own fuel storage and transfer system too. Shipped complete with all transformers and switchgear, ready to connect to the load or utility.

This rapid response from our trained staff will ensure each Building Block is shipped and delivered on site, on time.

**Power when you need it fast!**

These Building Blocks are strategically placed around the world, so that time to transport them to site is kept to a minimum.

# BUILD

From off-loading to fully working order – a matter of a few days! Each Building Block is built and operated by our experienced staff, which means the absolute minimum build time.

All pipework and tankage, all cables and connections are labelled and stored in “assembly” order prior to shipment, to facilitate ease and speed of build.

**Anytime  
Anywhere**

These mini power stations cover a known footprint, so if more power is needed, say 10MW, then just double the size. Each Building Block is controlled centrally with remote monitoring as a standard feature, so running multiple blocks simultaneously, presents no problem.

# CONNECT

Our trained operators connect the generator sets to the transformers, switchgear and the demand, whether a local load or mains utility. They also connect all piping and supervise fuel delivery.

Operated 24 hours a day and 7 days a week, the 5MW Building Blocks lead the competition in reliability and availability.

**Power for as long as you need it**

The complete station has been designed and manufactured for minimal control and maintenance, thus significantly reducing downtime and life cycle costs associated with normal plants of this size.
