

The Power Provider

Global Power

Cummins Power Generation

With over 60 years experience in power generation and belonging to the Cummins Inc group of companies with a turnover in excess of \$6BN, we pride ourselves in delivering Cummins designed and manufactured power solutions.

We can provide whatever power you want, from a 30kW back-up supply for the farm or a 30MW power station supplying the national grid.

From an embassy in Turkmenistan to an Antarctic Survey Station and a hospital on the Californian coast to a mine in Papua New Guinea, we are solving people's power needs wherever they are, whatever they need.

Global Partner

**One Source
One Voice**

The **Cummins Power Generation** engine and alternator combination, with **Power Command™** control is the industry leading power pack.

With our long experience of producing generator sets from between 30 and 2500kVA, you can be confident that we can build the power solution you need.

Diesel Power

Reliable Power 24/7

Whatever the application and however critical the power supply, our customers know our products will not let them down.

Whether open or enclosed, standalone or multiple set installation, we excel at producing cost effective, stable and reliable power solutions.

When you need power, you will get it, that is our guarantee.

Whether your need for temporary on-site power is planned or takes you by surprise, **Cummins Power Rental** can deliver the equipment and services to get you working again - fast.

All rental units from 35kW to 2MW are mobile and available in fully sound attenuated housings.

Our Cummins certified technicians will deliver and set up the power you specify, wherever you need it.

In addition to our wide range of **PowerCommand™** gensets, we furnish and install all necessary peripheral equipment, including transformers, cables, switchgear and more. We perform on site connections and all required maintenance. We can even replenish your fuel daily.

Anywhere**

**Simply
Power**

Power Projects

Turnkey Power Stations

When there is a need for reliable power and the utility supply is erratic, we can install a standalone station.

Cummins Power Projects has a fast, flexible and efficient solution to the problems of growing base demand.

With containerised mini-power stations, designed to operate in parallel with, or independent of the local utility, 5 to 30 MW of power can be supplied very quickly, managed and maintained by **Cummins Power Generation**.

Power by the Hour

Cummins Power Generation can install sufficient generating capacity for all your power needs, then you can pay us only for the power you use and not the value of the necessary equipment.

We can agree a price for power, based purely on kW supply, anywhere in the world.

Cummins Power Generation offer both combined heat and power solutions as well as pure power producing installations.

By combining the electrical efficiency of the genset and converting the exhaust heat to steam and hot water, the result is an extremely efficient installation with low life cycle costs.

Today, advances in lean-burn gas reciprocating engine technology, heat exchanges and systems controls, make cogeneration both practical and economical for a wide range and size of power applications.

Combined Heat and Power

Gas Power

When gas is the most plentiful fuel supply a **Cummins Power Generation** pure gas power solution may be the best option.

High power output, combined with low fuel consumption and low emissions, are key market leading characteristics of the Cummins gas genset.

As a single source supplier we can offer seamless design, installation, commissioning and operation of power packs from 300kW to 3MW and standalone power stations, up to 30MW.

With dedicated regional service teams, we can install, commission and service any of our products, at a time to suit our customers.

Professional servicing, planned in line with our customers requirements, reduces downtime and thus maximises efficiency.

Extensive training courses, run on-site or in purpose built training facilities, gives our customers and field personnel unequalled capabilities.

Computer based training, on many of our products, is now available for distance learning and subsequent reference.

One Source One Warranty

"The best warranty in the industry"

A superlative product, backed by an enviable warranty make **Cummins Power Generation** the best choice for any power solution.

AfterSales Power

Worldwide Continuity

Cummins Power Generation

provides a unique service in that we can deliver to your door, anywhere in the World, any power solution.

We can manufacture, install, commission, and maintain your equipment to give you the ultimate peace of mind.

We have the expertise to design a custom solution for any location or provide one specification for one price, anywhere in the world. A truly global partner to your business.

As your global partner, we can furnish you with pre-agreed costs for your power requirements, which you can budget for your long term business plans.

These agreements can combine all equipment and servicing or be purely on a Power-by-the-Hour basis.
